## CROATIAN ENERGY DAY

World Energy Council  
CONSEIL MONDIAL DE L'ENERGIE

Zagreb, 27<sup>th</sup> of November 2015

2<sup>nd</sup> Call

EU ENERGY POLICY AFTER 21<sup>st</sup> CONFERENCE  
OF THE PARTIES TO THE UN FRAMEWORK  
CONVENTION ON CLIMATE CHANGES (COP21)

U Parizu će se od 30. studenog do 11. prosinca 2015. održati 21. konferencija stranaka Okvirne konvencije UN-a o klimatskim promjenama (COP21).

Glavni cilj je da se sve zemlje, uključujući one koje emitiraju najviše stakleničkih plinova, bile one razvijene ili zemlje u razvoju, po prvi puta obvežu općim sporazumom kako bi se globalno zatopljenje zadržalo na razini ispod 2°C. Ovim bi se sporazumom trebala uspostaviti ravnoteža između obveza iz Kyota, odnosno matematičke podjele smanjenja emisija na temelju zajedničke gornje granice, te onih iz Kopenhagena, koje su se temeljile na neobvezujućim nacionalnim angažmanima bez međusobno sličnih karakteristika.

Europska unija je 24. listopada 2014. usvojila novi okvir klimatske i energetske politike do 2030. godine koji podrazumijeva smanjenje emisije stakleničkih plinova za najmanje 40 posto. EU je iskazala političku volju za promjenama pa se problem s definiranja cilja prebacuje na izbor mjera kojima bi se provela nova klimatska politika.

Sve promjene u energetskej politici zbog klimatskih promjena nije moguće napraviti bez dodatnih ulaganja jer su cijene novih tehnologija više pa iziskuju dodatne troškove. Za raspravu na Forumu postavljaju se pitanja: Koliko treba povećati troškove za realizaciju politika smanjenja emisija CO<sub>2</sub> i kome te koliko, kome, kada i na koji način dati financijsku potporu. Za svaku zemlju članicu postoji i dodatno pitanje: „Kako iz politike smanjenja emisija CO<sub>2</sub> stvoriti dodanu vrijednost u gospodarstvu, a da sve to ne završi samo kao dodatni trošak?“

The 21<sup>st</sup> Conference of the Parties to the UN Framework Convention on Climate Changes (COP21) will be held in Paris from 30<sup>th</sup> November to 11<sup>th</sup> December 2015. The main goal is that all countries for the first time commit themselves to The Common Agreement in the order to retain the global warming on a level below 2°C. The Agreement should include the countries that emit most of the greenhouse gasses whether they are developed countries or they are developing countries. This Agreement should establish a balance between the Kyoto obligations, i.e. mathematical division of gas emission reduction on the basis of a common upper limit, and the obligations from Copenhagen, which are based on the non-obligatory national engagement without mutually similar characteristics.

The European Union adopted a new climate and energy policy framework for 2030 on 24th May 2014 which implies a greenhouse gas emission reduction by at least 40%. The EU has demonstrated political will for changes, therefore, the problem of defining the goal switches to the choice of measures to conduct the new energy policy.

It is not possible to achieve all the changes in the energy policy due to climate changes without additional investment because the prices of new technologies are higher and therefore additional expenditures are required. For the discussion on the Forum the following questions are being asked: How much do the expenditures for the implementation of the CO<sub>2</sub> emission reduction policy need to be increased, as well as to whom, when, how much and on which way is financial support to be given? For every member state there is an additional question: "How to gain an added value in the economy from the CO<sub>2</sub> emission reduction policy without ending up only with an additional expenditure?"
