# 28<sup>th</sup> FORUM

## CROATIAN ENERGY DAY

### ONLINE APPLICATION FORM

Over the past few years, thanks to the engagement of international institutions, newly made Agreements, EU Energy and Climate Policies, energy policy goals till 2050 have become clearer and responsibility for their achievement is continually increasing. It is expected that all law acts necessary for the implementation of the Energy Policy Clean Energy for all Europeans will be adopted by the end of 2019. One of the important documents is the integrated Energy and Climate Plan which all EU member are supposed to adopt till the end of 2019, in the process of interactive communication and joint learning in integrative planning.

The 28<sup>th</sup> Forum will cover the topic: How do we see the energy transition till 2050, from different perspectives of the various participants in those processes; energy companies, energy industry and energy customers, with the goal of helping in understanding and contributing to the quality of the Energy Strategy implementation. Energy transition in Croatia will be discussed from different angles and points of view of various stakeholders, such as:

- Companies from the power, gas, oil and heat sectors,
- Renewable Energy Companies,
- Companies working on renovation and construction of buildings with almost zero energy consumption,
- Companies dealing with advanced technologies and increasing of energy efficiency,
- Companies and institutions for the development and technology,
- Banking and financial institutions,
- Energy customers, citizens, various associations and businesses,
- Media.

The success of energy transition in Croatia depends on the involvement of all transition participants and their ability to recognize and understand processes, timely make business decisions, develop processes with minimal administration and ensure availability of required products, devices and technologies. It may be expected that the transition processes will be accelerating and that companies will join their forces in the development of new technologies, thereby securing their place and role in the new energy future.

#### Under the patronage of:

Government of the Republic of Croatia  
Croatian Academy of Engineering  
Croatian Chamber of Economy  
Ministry of Economy, Entrepreneurship and Crafts
